Abréviations :

| | | | | | |
|------------|-------------------------|-------------|-------------------------|-------------|---------------------------|
| Ca | Calcium | MA | Matière azotée | PDP | Phosphore digestible porc |
| Cys | Cystine | Met | Méthionine | PUFA | Acides gras polyinsaturés |
| EDP | Energie digestible porc | MUFA | Acides gras monosaturés | PV | Poids vif |
| IPM | Indice PUFA-MUFA | NA | Sodium | Thr | Thréonine |
| Lys | Lysine | P | Phosphore | Trp | Tryptophane |

IPM = PUFA + 1.3 x MUFA. Limite IPM < ou = à 1.7 g / MJ EDP.

¹ 1^{er} au 84^e jour pour le début de la gestation.

² 85^e au 114^e jour pour la fin de la gestation.

³ durée allaitement 35 jours, PV au sevrage des porcelets 8.5 kg.
